EDUCATION

University of Colorado Boulder	August 2022 - May 2024
Master of Science in Computer Science	GPA: 3.80/4.0
Pune Institute of Computer Technology	August 2017 - June 2021
Bachelor of Engineering - Computer Engineering	GPA: 3.91/4.0

EXPERIENCE

Systems Engineer I Charter Communications (Greenwood Village, CO)	June 2024 - Present
- Orchestrated and maintained Kubernetes (EKS) clusters supporting 10+ production applications, achieving 99.99% uptime. - Implemented GitOps workflows with ArgoCD to deliver biweekly zero-downtime deployments using Blue-Green and Canary strategies, ensuring consistent and reliable rollouts across environments. - Participated in 24/7 on-call rotation and led P0/P1 incident response, reducing mean-time-to-recovery (MTTR) by 30% through runbooks, playbooks. - Improved observability and proactive detection by integrating Datadog, Prometheus, Grafana, and Splunk for log correlation and anomaly detection for legacy application. - Engineered Terraform IaC for AWS resources (S3, Lambda, EKS), streamlining infrastructure provisioning and compliance checks. - Partnered with various teams to remediate 200+ CVEs quarterly via hardened Golden AMIs and patch automation pipelines. - Strengthened compliance posture by enforcing IAM least privilege and continuous hardening of AWS workloads. - Implemented cost-optimization measures (tagging enforcement, storage tiering, rightsizing) to achieve 15% cloud savings working with FinOps. - Worked with service mesh concepts (Istio) and contributed to traffic-shaping and resilience patterns across microservices.	
Associate Systems Engineer Intern Charter Communications (Greenwood Village, CO)	June 2023 - August 2023
- Automated Datadog alert configurations using shell and Python scripts, seamlessly integrating with CI/CD pipelines to reduce downtime by 15%. - Designed and orchestrated a comprehensive CI/CD workflow for machine provisioning, including installation and configuration of observability tools. - Managed Kubernetes cluster deployments for a streaming service, ensuring optimal performance, high availability, and scalability to support a growing user base.	
Associate Software Developer (Full-time) NICE Systems (Pune, India)	July 2021 - July 2022
- Migrated Actimize platform code-base from Angular to Vue, resulting in Single Page Application with 30% reduction in loading time. - Fixed production defects, conducted thorough code reviews, and achieved 90% code coverage with Jest, resulting in efficient refactoring and fewer bugs in production. - Managed development, unit testing, and documentation for in-house UI library built with Quasar, ensuring consistent UI/UX across products. - Containerized Java(Gradle, Maven) and Python codebases, combined Kafka topics, and deployed on Kubernetes cluster using Helm charts. Conducted Vue training with 50+ attendees, equipping team with essential skills for ongoing product development.	

CERTIFICATIONS

CKA: Certified Kubernetes Administrator	April 2025
AWS Certified Developer – Associate	September 2023
Google Cloud Fundamentals: Core Infrastructure	May 2020

SKILLS

Languages: Python, Java, C/C++, JavaScript, Golang, Bash, TypeScript, YAML,
Cloud Services: AWS (Lambda, SES, DynamoDB, API Gateway, EC2, S3, VPC, CDN), GCP.
OS: Fedora, Ubuntu, RedHat(Linux).
Database: MySQL, PostgreSQL, SQLite, Redis.
Tools & Tech: Git, Docker, Kubernetes, Helm, Jenkins, Ansible, JSON, Agile Methodologies, ArgoCD, GitHub Actions, Grafana, Kafka, gRPC, GraphQL, REST, Postman, DataDog.

PROJECTS

Amazon Price Tracker (Software Development/Full Stack)	January 2023 - May 2023
- Built a resilient price-tracking service with a Vue.js frontend and Python/Flask backend. Instrumented with Prometheus metrics and Grafana dashboards for real-time monitoring and alerting. - Containerized services with Docker and defined Helm charts for Kubernetes deployments; integrated GitHub Actions for CI/CD and automated image builds and security scans. - Implemented cron-based scraper jobs on EKS, used Redis for caching and S3 for storage; designed alerting for rate-limit events. - Integrated Apache Traffic Server (ATS) as a reverse proxy and caching layer in front of the API backend to reduce latency and offload requests, improving cache hit ratio and system reliability under high load.
